OmniGlobe will be setting up a broadband network capable of delivering high-speed Internet services to rural areas of Perth County. The service should be available by the end of June.

The funding for the for the project was part of a \$10-million Ontario government initiative awarded to 18 rural municipalities. Some areas of Perth County still don't have high-speed Internet access.

OmniGlobe networks will create wireless "hot zones" covering areas up to 10 kilometres from the base stations. Subscribers will have access to a wide range of applications including high-speed Internet access and Voice over IP.

OmniGlobe Broadband will be opening its local offices in April.

For more information about availability in your area contact George Emery 801-5975.
